# Premier Acoustic Product Datasheet

**JRC10 REMOTE CONTROL MICROPHONE 5 ZONE**

The JRC10 is an optional remote desktop paging microphone which, when connected to the dedicated mic input on either the JPA1120A or JPA1240A amplifiers, will have priority over other inputs. Up to three of these mics can be 'daisy chained' with required priority assigned to each mic. A chime will automatically activate when the push to talk button is pressed and if a mic of higher priority is in use, a 'busy' light will illuminate. Any or all of the speaker output zones can be selected and paged and if a digital message module is fitted to the amp, the messages can be individually selected and activated from the mic.
